Oak & Ember Informational Website

Project 03 | Development plan

Project Goal: We'll build Oak & Ember as a fictional premium restaurant and café website, taking inspiration from The Ivy Collection—particularly its long, visually rich homepage, elegant presentation, and restaurant-focused navigation.

Our version will have its own identity, using deep forest green, sage, ivory, and subtle gold accents.

Project Overview

Item	Description
Project Name	Oak and Ember
Business type	Restaurant & Café
Website type	Multi page informational website
Pages	6
Technology	HTML, CSS, JavaScript
Design	Premium, Warm, Elegant, Responsive
Main Purpose	Menu. Opening hours, announcements, reservations, gallery, contact, careers
Payment Integration	None
E-commerce	Not Included
Deployment	GitHub Pages / Cloudflare Pages
Database	Not Required

Primary objectives: Allow customers to explore the restaurant, view the menu, discover signature dishes, check announcements and opening hours, request table reservations, and learn about career opportunities.

Color Usage

- Forest Green #183C32
- Moss Green #416653
- Sage #A8B8A0
- Ivory #F7F5ED
- Muted Gold #C5A46D
- Dark Charcoal #252B26

1. Website Sections and Features

Home Page – Detailed Plan

- Announcement bar + Navigation – Our story, Full Menu, Gallery, Reserve table
- Full-width hero carousel
- Welcome to Oak & Ember - CTA: Discover Our Story
- Our Signature Dishes - CTA: Explore Full Menu
- Seasonal Specials & Announcements
- The Dining Experience - CTA: View Gallery, Enquire now (email inquiry)
- Guest Testimonials

Other pages

About us. - Restaurant story, culinary philosophy, sourcing and ingredients, atmosphere, chef introduction, and a reservation CTA.

Our Menu - Filterable menu categories: Breakfast, Lunch, Dinner, Desserts, and Beverages. Each dish includes a name, description, price, and relevant dietary information. Signature dishes receive special emphasis.

Gallery - Responsive image grid featuring food, interiors, drinks, and events, with category filters and a lightbox.

Reservation - Customer name, email, phone, preferred date, time, party size, and special requests. Form validation, acknowledgement, and email notification to the owner.

Careers - Introduction to working at Oak & Ember, employee culture, benefits, current vacancies, job requirements, and application instructions.

2. Reservation Functionality

Request-and-confirm model will be used.

1. Customer chooses preferred date, time, and number of guests.
2. Customer submits the reservation request.
3. A form service securely forwards the request to the restaurant owner's email.
4. The customer receives an acknowledgement, if configured.
5. The owner checks table availability and replies with a confirmation or alternative.

3. Shared footer

Every page will have the same footer.

4. Development Phases

Phase 1: Project setup and design system

Create folders, set colors, fonts, shared components.

Phase 2: Homepage development

Build the carousel and all homepage sections.

Phase 3: Internal pages

Build About, Menu, Gallery, Reservations, Careers.

Phase 4: JavaScript functionality

Implement menu filtering, gallery, navigation and forms.

Phase 5: Responsive design and testing

Test mobile layouts, accessibility and performance.

Phase 6: Deployment and portfolio

Publish on GitHub Pages and add to portfolio/Fiverr.

Out of scope

The project will not include e-commerce functionality, online payments, user authentication, database integration, real-time table availability, or an admin dashboard. Ongoing website maintenance and advanced reservation management are also excluded.

Final deliverable

The project will deliver a fully functional, responsive six-page restaurant website developed using HTML, CSS, and JavaScript. It will include interactive features, an email-based reservation request form, complete source code, and a live deployed website.
